DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 9/12/2005 complies with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Berger et al (6,121,741).

With respect to claim 1, Berger et al show in figure 1 at least two swivel-mounted wiper arms 8 that are connected to one another via a crank mechanism 7, wherein one of the wiper arms 8 is directly coupled with a driven shaft of an electromotive drive 5 and 6.

With respect to claim 2, Berger et al show in figure 1 a uniformly transmitting gear G 6.

With respect to claims 3, 4, 11 and 12 figure 1 shows the motor M 5 of the rotational direction reversal with the dot paths.

With respect to claims 5 and 13, the sensor 2 features a sensory mechanism to detect the end of travel.

With respect to claims 6 and 14, figure 1 shows a speed sensor 9.

With respect to claims 7, 15 and 19, since figures 2 and 3 show the cycle control of the wiper, it is inherent the wiper cycle including the acceleration and deceleration for a reduction in the rotational speed of the drive near the start and the ends of travel of the wiper arms 8.

With respect to claims, 8 and 16, figure 1 shows that at least two wiper arms 8 are coupled via a crank and rocker linkage 7.

With respect to claims 9, 10, 17 and 18, figure 1 shows the wiper arms feature a path of motion in the same direction.

Citation of Pertinent References

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The references cited on form 892 taken alone or in combination teach and suggest direct drive wiper control systems with a crank and rocker linkage connect to the direct drive for controlling the wipers arms moving in the same rotational and reversal direction. Claims 1-19 are not patentable distinct from these references.

Communication Information

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to /Paul Ip/ whose telephone number is (571)-272-1941. The examiner can normally be reached on Monday to Friday from 6:30 am to 3:00 pm.
